Agenda

01 Introduction & Demo (10 min)

02 Generate Exercise (30 min).

03 Evaluate & Report (10 min)

04 Debrief & Close (10 min).

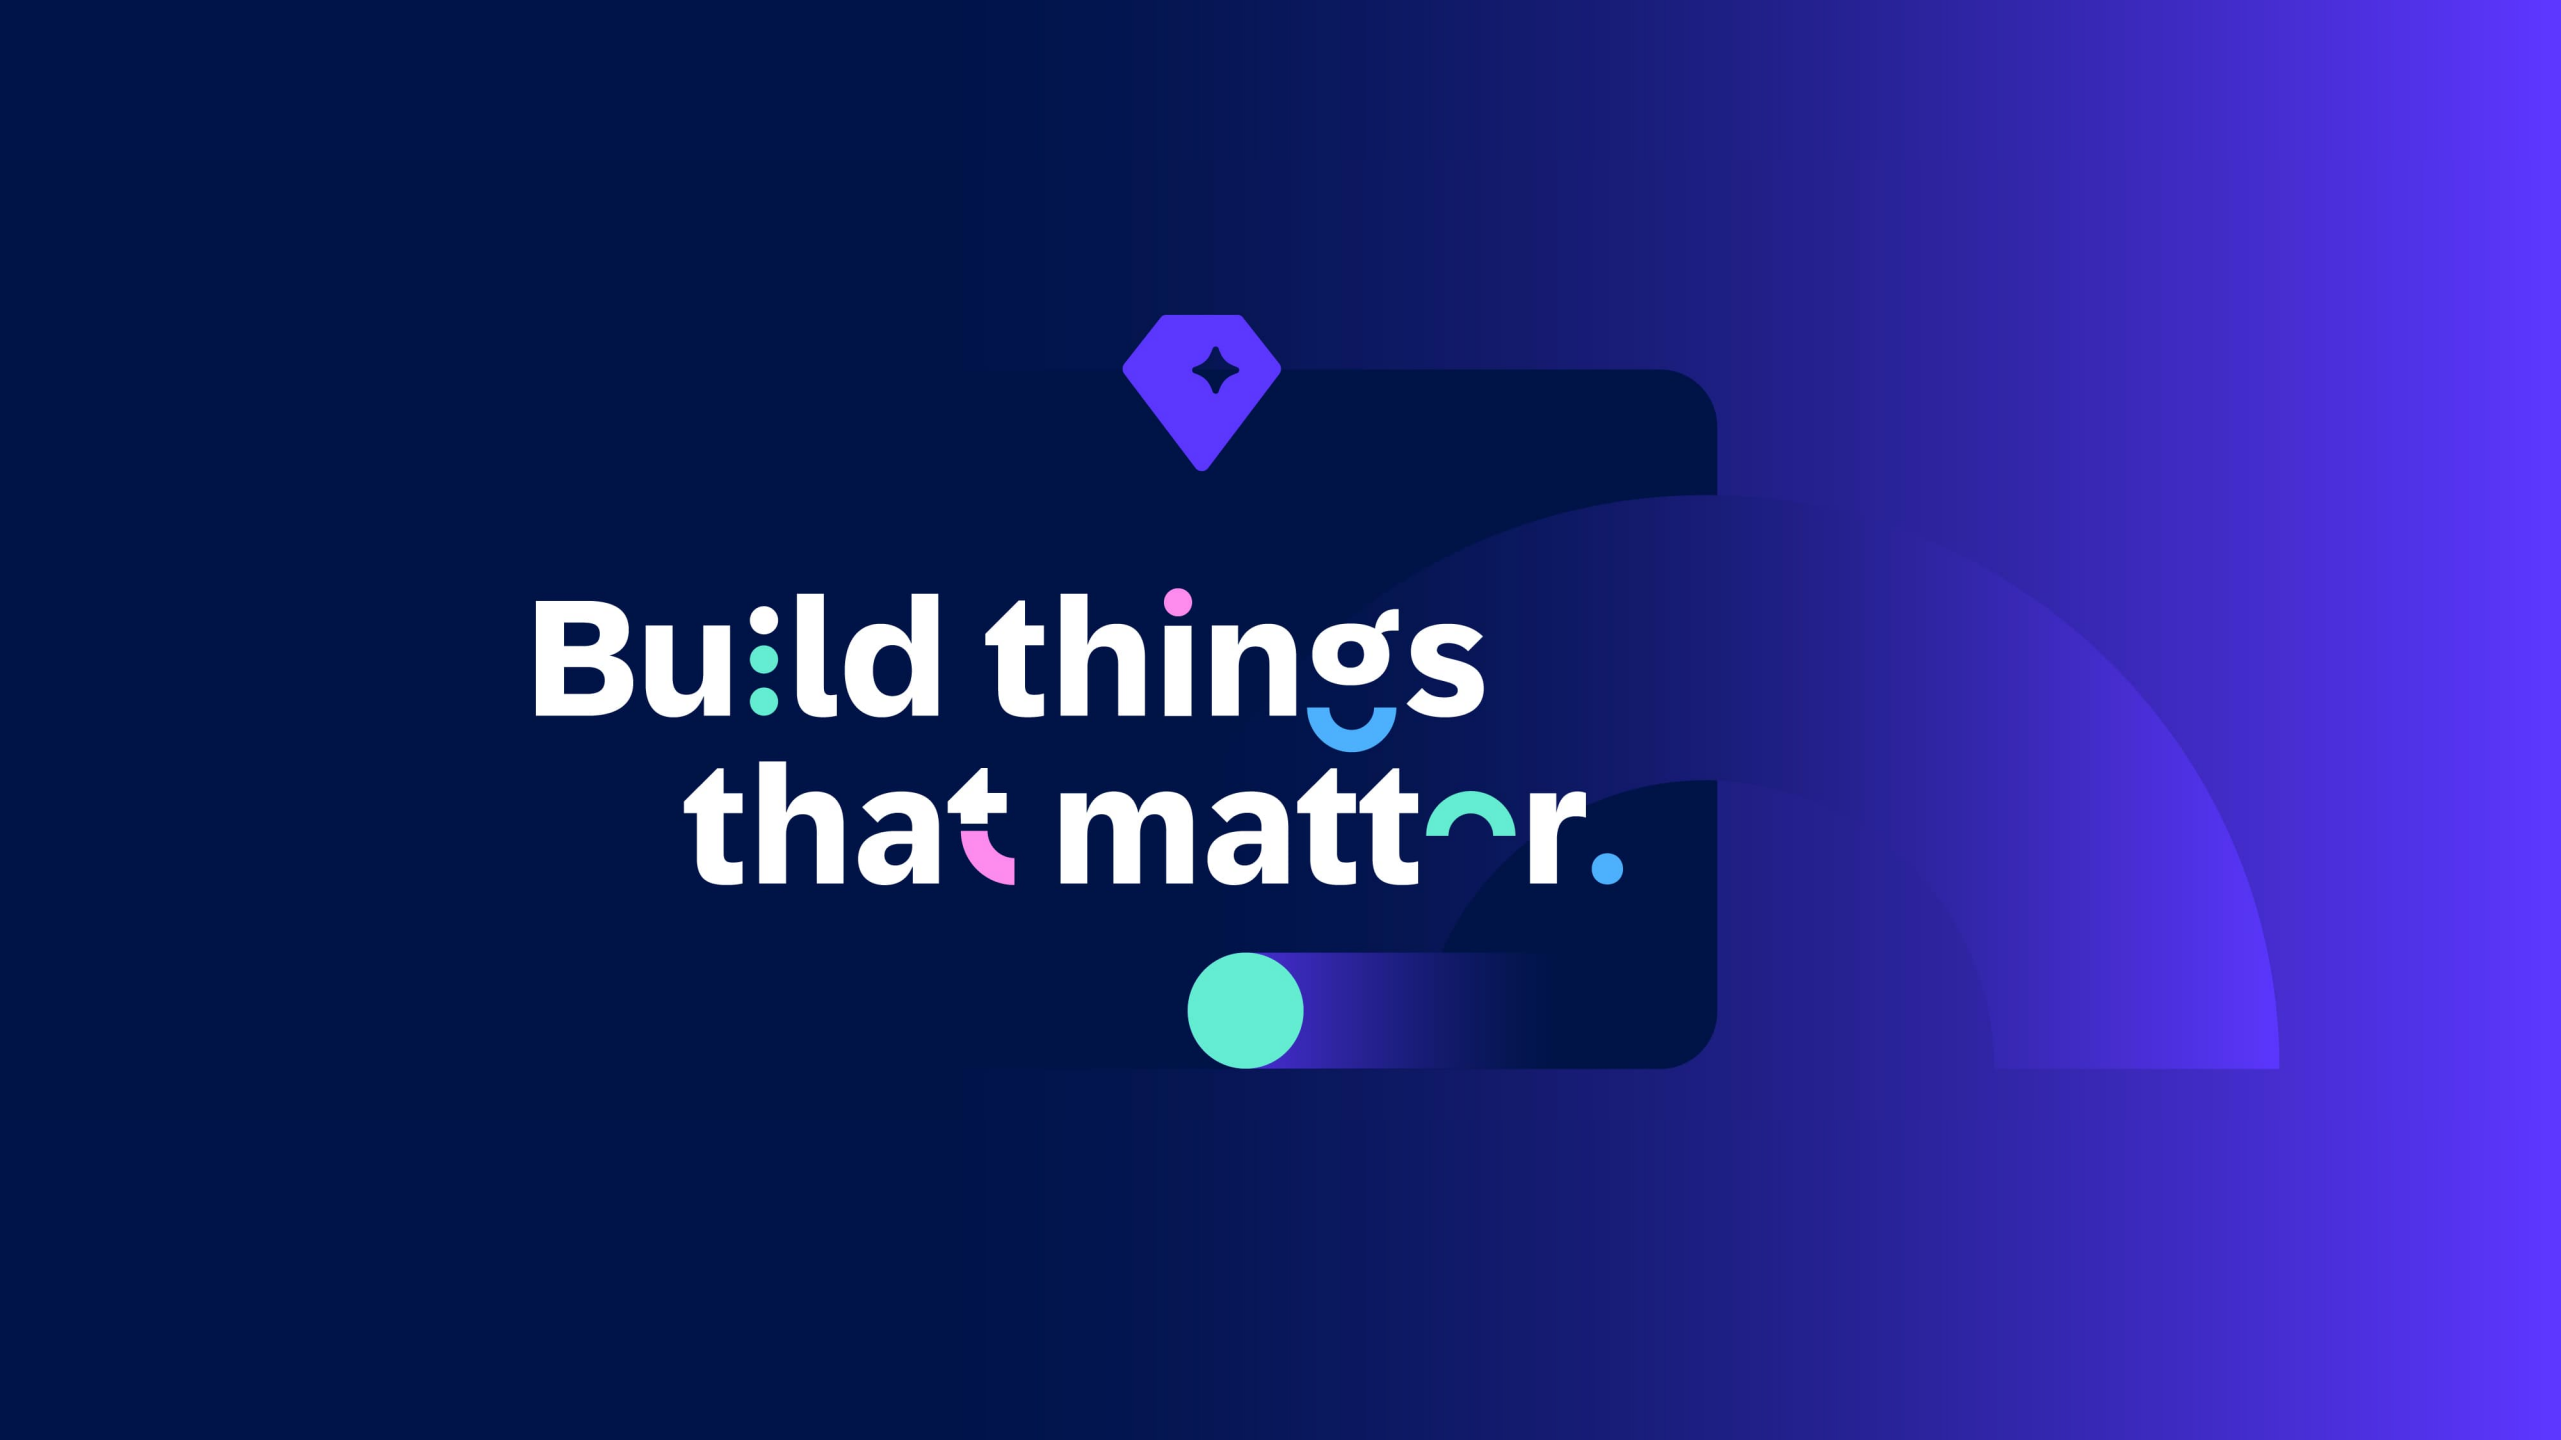

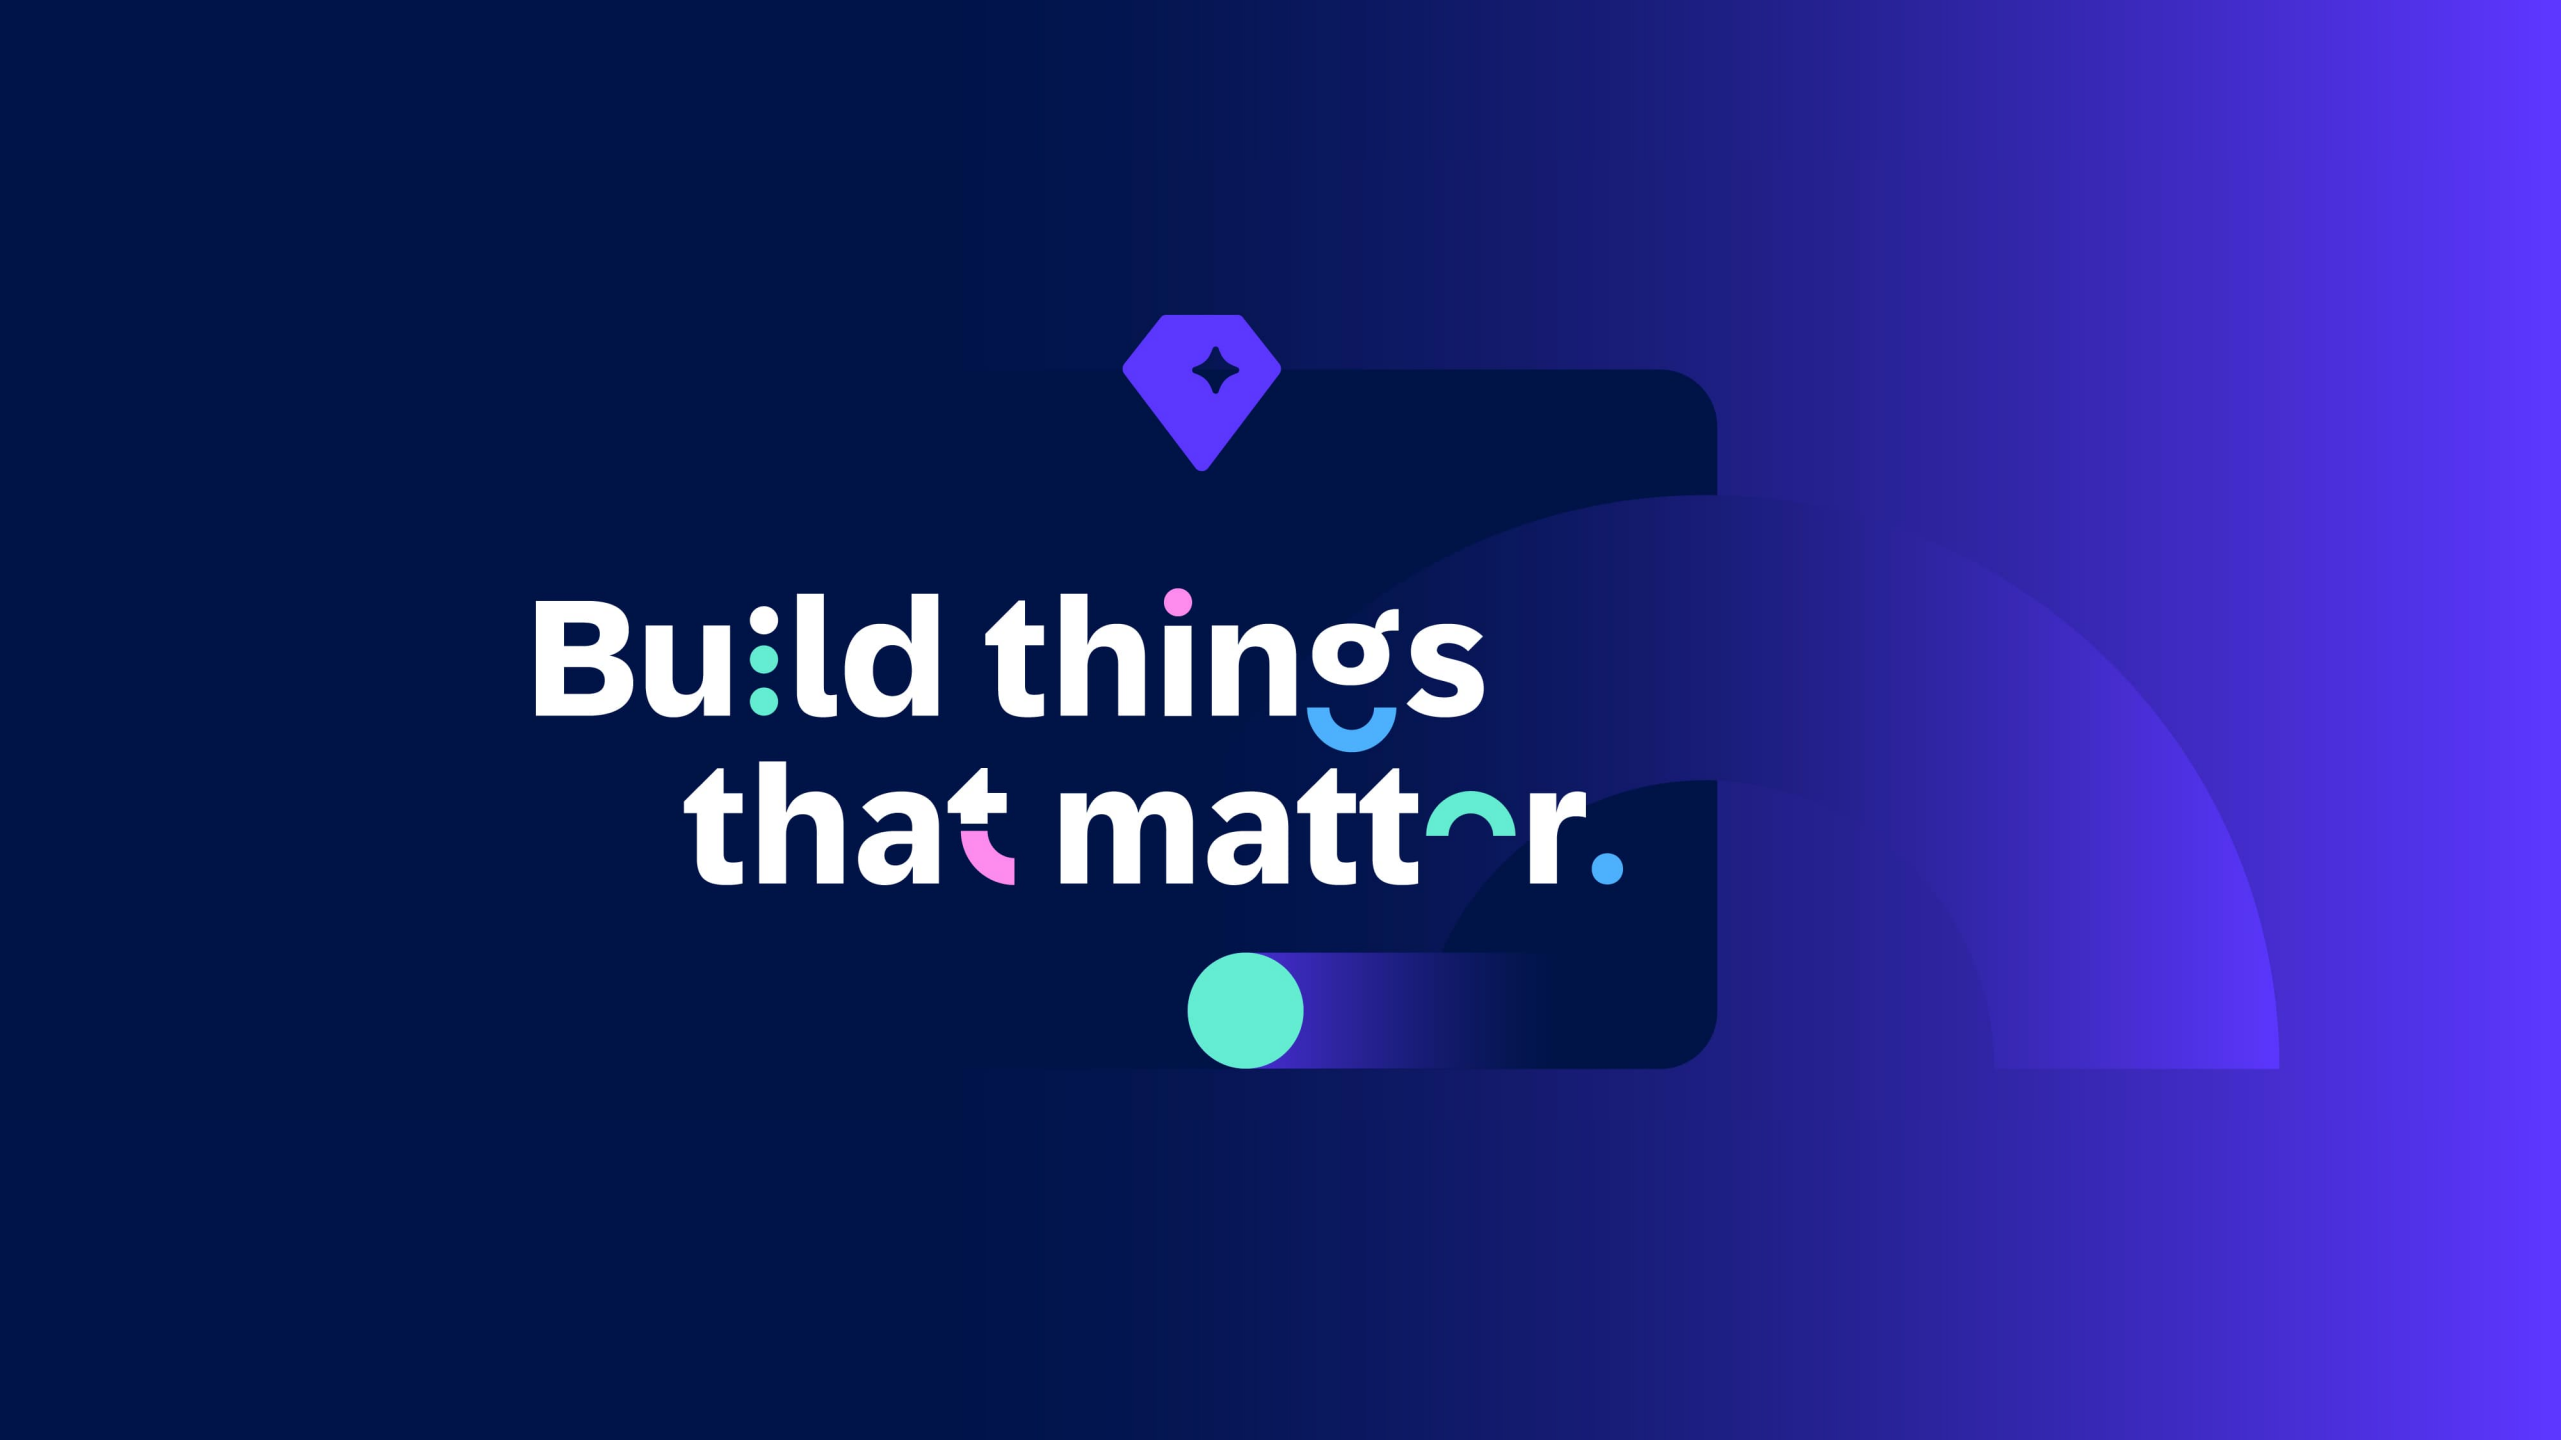

You are the Security Incident Responder

Your client just received a CERT advisory: their industry is under active attack. They need an incident response exercise and they need it today, not in three weeks.

In this workshop, you'll learn how to deliver exactly that. As a security consultant using TTXGenAI, you'll transform real threat intelligence into a customized tabletop exercise in minutes. You'll generate AI-powered scenario injects, guide your client through high-pressure decision points, and walk away with board-ready documentation all powered by SAP AI Core.

From threat intel to client deliverable in under an hour. Welcome to the future of incident response training.

Build things
that matter.

Build things
that matter.

What is a Tabletop Exercise?

- A Tabletop Exercise (TTX) is a discussion-based simulation where your team walks through a realistic security incident step by step in a safe, controlled environment. No judgement, no criticism, no pressure, fail to learn … And a lot of fun
- Usually it takes
  - 2 to 3 weeks to prepare an exercise
  - 1 or 2 day to run the exercise
  - 2 to 3 days to write the reports
  - 1 to 2 weeks to execute action points
- We reduce to
  - 30 minutes to prepare an exercise
  - 2 minutes to generate reports
  - 2 minutes to propose an action plan (JIRA tasks, Signavio remediation processes)

Learning Objectives

By the end of this session, you will:

- ✅ Identify SAP-specific attack vectors and IoCs
- ✅ Apply structured IR frameworks (NIST/ISO/SAP SIRT)
- ✅ Generate and evaluate realistic AI-assisted exercises
- ✅ Produce executive security reports

The NorthernStorm Campaign

- NORDIC-CERT advisory: Active ransomware campaign
- Target: Nordic retail organizations
- Attack vector: SAP Gateway vulnerability
- Your mission prepare the company to : Detect → Contain → Recover

Pre-Session Setup - Overview

Three things you need:

- 📄 NORDIC-CERT Advisory (threat intel)
- 📄 Client Brief - RetailNordic GmbH
- 🌐 Tool Access: https://ttxgenai.cfapps.eu10-005.hana.ondemand.com

Demo – How to Access the Tool

TTXGenAI Exercise Generator

🌐 https://ttxgenai.cfapps.eu10-005.hana.ondemand.com

- All AI generation happens in browser
- Session is in-memory
- ⚠️ Don't close the browser tab during generation

📌 Action: Open the tool now

Generate the Excercise

Generate Exercise — Step 1

Create Threat Intelligence Document

- Open the NORDIC-CERT Advisory
- Copy all content into a .docx or .txt file
- Save with YOUR name/identifier
  - Example: NorthernStorm_JohnDoe.docx

Why? This becomes your incident inspiration source

⏱️ Time: 3 minutes

Generate Exercise — Step 2

Upload to Incident Library

- In TTXGenAI tool, click "Incident Library"
- Upload your threat intel file
- Confirm upload successful

💡 Tip: This library can store multiple real-world incidents for future exercises

⏱️ Time: 2 minutes

Generate Exercise — Step 3

Create New Exercise

- Return to main page
- Click "Create New Exercise"
- Exercise Title: Include your name/identifier
- Example: RetailNordic IR Exercise - JohnDoe

Why personalize? We'll compare results across teams

⏱️ Time: 1 minute

Generate Exercise — Step 3

Configure Exercise Parameters

- Use the RetailNordic Client Brief to fill:
- Organization profile
- System landscape
- Team structure
- Standard/Guideline: Select NIST SP 800-84

📌 Reference the PDF for accurate details

⏱️ Time: 5 minutes

Generate Exercise — Step 5

Scenario Description

Specify what you want:

Exercise type: Incident Response – Select the incident from the CERT document

Duration: 15 minutes

Number of injects: 2 only

💡 Inject = a scenario event that requires team response

⏱️ Time: 3 minutes

Generate Exercise — Step 6

Real Incident Inspiration

In the dropdown:

Select your uploaded **fi**le name

(the NorthernStorm document with your identifier)

This tells the AI which threat intelligence to base the exercise on.

⏱️ Time: 1 minute

Generate Exercise — Step 7

Generate & Wait

Click "Generate Exercise"

☕ Have a drink!

AI processing time: ~30-60 seconds

What's happening behind the scenes?

- SAP AI Core analyzes threat intel
- Generates contextual injects
- Maps to NIST framework
- Creates evaluation criteria

Generate Exercise — Step 8

Compare Results

⏱️ 5 minutes for group discussion

Discussion points:

- How did scenarios differ?
- Which injects were most realistic?
- What variations emerged from the same threat intel?

💡 Learning: AI generates diverse scenarios from identical inputs

Evaluate & Report

Evaluate — Inject 1

Simulate a Failed Response

For Inject 1 Evaluation:

Select: ❌ FAIL

Observation: "No answer provided" (or similar)

Why fail intentionally? See how the tool handles gaps and generates improvement recommendations.

⏱️ Time: 2 minutes

Evaluate — Inject 2

Simulate a Successful Response

For Inject 2 Evaluation:

Select: ✅ SUCCESS

Observation: Copy-paste the "Expected Actions" suggestion

Why succeed? Compare how recommendations differ between success/failure.

⏱️ Time: 2 minutes

Generate Security Report

AI-Powered Analysis

Click "Generate Security Report"

Wait ~20 seconds for AI processing

What's being generated?

- Gap analysis (based on your inject evaluations)
- Prioritized recommendations
- Executive summary
- Compliance mapping

Review Security Recommendations

Group Discussion

Let's review together:

- What patterns do you see?
- Are recommendations actionable?
- How do they differ based on success/failure?
- Would this be useful for your organization?

⏱️ Time: 3 minutes

Export Reports

Take Your Deliverables

Export two reports:

📄 Recommendations (DOCX)
Detailed findings grouped by priority
Audience: Security team, IT management

📄 Board Summary (DOCX)
Executive briefing for non-technical stakeholders
Audience: C-suite, board members

💡 These are client-ready deliverables

Wrap-up & Homework Challenge

Within 48 hours, we invite you to:

✅ Generate ONE exercise for a real/hypothetical company

✅ Upload ONE threat intelligence document

(news article, CERT advisory, vulnerability report)

✅ Draft a 1-page service offering

- - Pitch to your team or customer
- - How would you use this tool?

💼 We can support you in running the exercise!
